

ABOUT UNIFY

Unify is a global provider of application development, data management, and migration solutions. Unify's solutions help companies to maximize value and reduce cost in the development, deployment, and modernization of business applications and data. Unify is headquartered in Roseville, Calif., with offices in London, Munich, Calgary, Paris, Sao Paulo and Sydney, in addition to a network of worldwide reseller and distributor partners. Visit unify.com for more information.

Application Development Solutions

TEAM DEVELOPER® is a visual object-oriented rapid application development product that is proven to shorten the development cycle by providing developers the tools needed to quickly design, develop and deploy Microsoft .NET desktop and browser applications. Team Developer provides a complete, integrated visual development environment and a powerful component developer facility that enables programmers to automate and customize the development environment.

NXJ® DEVELOPER is a powerful visual development environment for rapidly building innovative Rich Internet Applications. NXJ Developer is distinguished by its combination of intuitive visual design, flexible programming, and ease of integration with both Java code and .NET business logic via Web Services.

Application Migration Solutions

COMPOSER CIPHERSOFT™ converts all releases of Oracle Forms applications to Java/J2EE and to Oracle's Application Development Framework (ADF). Composer CipherSoft also offers a tool and services for upgrading Oracle Forms to the latest Oracle Technology platform.

COMPOSER MAINFRAME delivers an automated code conversion and data migration for modernizing applications to newer code and databases. Migration eliminates risk and substantially reduces time and costs for IT departments.

NXJ® ENTERPRISE adds powerful Business Process Management and add-on Reporting capabilities to NXJ Developer for visual, fast business process-based application development.

ACCELL® is a family of 4GL-based rapid application development products for building character-based client/server applications with native optimized connectivity for Unify, Oracle, Sybase and Informix databases.

VISION® is a cross platform (Unix/Linux/Windows) graphical object-oriented development software that provides highly scalable and feature-rich n-tier application development and deployment.

COMPOSER NOTES™ is a software toolset for migrating Lotus Notes applications to the Microsoft .NET framework. Composer enables like for like migration while preserving the User Interface, business logic/workflow (including LotusScript). Composer migrates simple and custom complex Notes applications without disruption to the business or end users.

Data Management Solutions

UNIFY Q® brings easy to use querying, reporting and information sharing for individuals. Unify Q is used to perform tasks such as querying the latest campaign data and providing the data as excel file or PDF documents to colleagues and agencies. With Q, data can be exported and imported to share the latest data points and support best possible business intelligence throughout an organization.

SQLBASE® is a fully relational, high performance, embedded database that allows organizations to manage data closer to the customer, where capturing and organizing information is becoming increasingly critical. SQLBase provides what other database companies cannot deliver: a self-recovering, maintenance-free embedded database architecture that enables IT, ISVs and VARs to focus on their solution, rather than the

SQLBASE® TREASURY is a fully encrypted version of SQLBase delivering protection and security of valuable data.

DATASERVER® is a family of data management solutions. DataServer ELS is a small footprint embedded database and DataServer is an enterprise relational database management system for mission-critical, transactional applications.
