

Corporate Profile

About Unify

Unify is a global provider of application development, data management and Service-Oriented Architecture (SOA) enablement solutions. Our suite of automated migration solutions, easy to use development products and maintenance-free embedded databases allows customers to enhance their SOA environment by improving time to market, increasing collaboration and service-enabling legacy information.

Unify's strategy is to work with organizations to "Enable SOA." We help businesses modernize and service-enable mission-critical legacy applications in support of enterprise-wide SOA initiatives. Based on market requirements for application modernization, our solutions help companies increase speed and agility, improve asset reuse, lower IT costs, reduce business risks and exposures, and free information previously locked within proprietary systems.

SOA Enablement Solutions

Composer for Lotus Notes™ is a software plus services solution that enables the migration of Lotus Notes applications to a Service-Oriented Architecture (SOA). Targeted at companies with Lotus Notes applications proliferated throughout the enterprise, Composer integrates with the .Net and Java platforms, leverages open standards via an SOA environment, and provides the capabilities and technology necessary for a comprehensive and automated migration. Composer modernizes Notes applications to enable organizations to share data previously locked in proprietary systems, reduce application license costs, and improve integration and collaboration within the enterprise.

NXJ Developer® is an award-winning visual development tool for the rapid development of innovative Web 2.0 Rich Internet Applications based on a service-oriented architecture (SOA). NXJ Developer is distinguished by its combination of intuitive visual design, flexible SOA programming, and ease of integration with both Java code and .Net business logic via Web

services. The combination of AJAX-rich client technology, Web services, workflow, reporting and portal integration make NXJ Developer a powerful and competitive solution for delivering SOA-based Rich Internet Applications.

Rapid Application Development Solutions

Team Developer® is a visual object-oriented rapid application development product that is proven to shorten the development cycle by providing the tools needed to quickly design, develop and deploy their Windows solution. Team Developer provides a complete integrated visual development environment.

ACCELL® is a family of 4GL-based rapid application development products for building character-based client/server applications with native optimized connectivity for Unify, Oracle, Sybase and Informix databases.

VISION® is cross platform (Unix/Linux/Windows) graphical object oriented development software that provides highly scalable and feature rich n-tier application development and deployment.

Data Management Solutions

SQLBase® is a fully relational, high performance, embedded database that allows organizations to manage data closer to the customer, where capturing and organizing information is becoming increasingly critical. SQLBase provides what other database companies cannot deliver; a self-recovering, maintenance-free embedded database architecture that enables IT, ISVs and VARs to focus on their solution, rather than the underlying database technology.

DataServer® is a family of data management solutions. DataServer ELS is a small footprint embedded database and DataServer is an enterprise relational database management system for mission-critical, transactional applications.

Professional Services

Unify Professional Services includes technical support, consulting and education services that ensure the customers' technology investments are meeting their business objectives. Unify Professional Services helps customers architect, develop and deliver enterprise application projects with fast time to market and reduced risks.
