

“The THW project consists of 926,000 lines of code and over 10,600 window controls. Without Team Developers OOP features, this project could not be maintained.

The use of extensive self-created class libraries and strict coding rules allows any of our developers to enhance and maintain any piece of the application in very short timeframes. Developers can quickly understand the clearly structured code.”

Easily Manage Personnel and Equipment Solutions with Team Developer and SQLBase

ORGANIZATION PROFILE THW, a civil protection service, provides worldwide disaster recovery assistance for Autobahn accidents and natural disasters, such as flooding, earthquakes and violent storms. Richter Softwaretechnik, a German technology consulting firm, contracted with THW to implement a solution offering complete personnel management that includes assignment of skills and training in addition to equipment management.

PROBLEM Richter required a Windows-based application, capable of operating without human interaction. In addition, it has to support a stand-alone and LAN database.

SOLUTION Team Developer provides timely application development to build the Windows-based application. In addition, SQLBase is an ideal fit for single-user and LAN databases that do not require administrative interaction.

BENEFITS

- SQLBase is available as *single-use and network database* for small and medium size businesses.
- SQLBase offers *zero administration* operations.
- Team Developer allows *rapid development* of Windows business applications.
- Team Developer and SQLBase provide Richter with a *competitive advantage* in winning large development projects.

HIGHLIGHTS Richter Softwaretechnik chose SQLBase as the database for this project because of its ease of administration and proven reliability. Team Developer was used to quickly develop a Windows based application.

THW's software application is highly distributed. Its headquarters and each of its 700 subsidiaries houses its own SQLBase database server. Changes in data are synchronized by the application from headquarters to subsidiaries and also from subsidiaries to headquarters, keeping all data current.

Each subsidiary and their respective headquarters can manage the special equipment needed, such as cranes, heavy-duty rescue trucks and rescue boats. It can also facilitate the transfer of equipment from one location to another and the company's headquarters can assign budgets to all subsidiaries.

The application also assists in managing THW's numerous part-time employees and helpers.

Team Developer has the power to develop complex applications quickly. During the development of the application, Richter created an extensive Class Library, utilizing Team Developer's OOP features, which makes development of new modules and functionalities even faster.

The combination of Team Developer's rapid development and SQLBase's hassle free database operations provides an optimal application development tool capable of winning complex IT projects.

The application has been in use for 10 years and has proven its reliability and ease of use - a result rarely achieved in large IT projects.

Richter Softwaretechnik has been delivering information technology solutions to businesses and governmental institutions for many years.
