

Unify Archive Platform™

Archive + Discover + Preserve

Organizations are faced with growing storage volumes as well as compliance, legal discovery and risk issues associated with managing the large and growing volumes of information. Unify | AXS-One enables organizations to address these challenges with a single, comprehensive content archiving solution.

The Unify Archive Platform enables corporations to preserve, manage, and utilize their electronically stored information (ESI) as an asset, while better managing storage resources, complying with industry regulations, enabling legal discovery and reducing the risks associated with electronic content.

The Unify Archive Platform, a policy driven, highly scalable archive solution for all forms of electronically stored information, processes all forms of disparate data types into a single unified archive where companies can manage its long-term preservation requirements, apply records management, support regulated industry requirements and manage legal discovery.

The Archive Platform provides support for any binary object and systems including:

- Email platforms - Lotus Notes, MS Exchange, SUN JMS, Bloomberg, SMTP
- File Systems and Desktops
- SharePoint
- Microsoft PSTs
- SAP Databases
- Print Stream data (ASCII, EBCDIC, Xerox/Meta, PDF)
- Instant Messaging systems
- Binary Objects, including Voice and Video
- Social media

It provides Web-based applications including:

- eDiscovery, Legal Holds, Legal Case Management and Review
- Web-based Search, Retrieve, and Extract
- Supervisory Review (for NASD 3010)
- Embedded Web-based search portals for MS Exchange and Domino

Email Archive

Automatically archive email and attachments from email servers based on policies. Remove original messages from users' mailboxes and replace them with short-cuts or archive messages based on Journaling to archive messages after they were sent and before they were received. Messages can be categorized and attached to both a corporate file plan and a storage file plan, for records and destruction management, and logical and physical migrations. In addition, any record, custodian, category, or date range can be placed on legal hold as part of structured legal discovery and legal case management application.

Legal Discovery

The Archive Platform enables companies to perform legal discovery, and manage records and legal holds by matter within an easy to use Web-based application. Each case can store an unlimited number of searches and the results of any search can be placed on legal hold and records can be extracted in a number of formats. Legal holds can be applied by search result, or by automated search and discovery that adds new records to legal hold automatically, based on record categories, date ranges, or by custodian or event driven categories determined by externally driven system events, such as an account close date.

Financial Services and Regulated Industries

For businesses operating in regulated industries, the Unify Archive Platform supports financial services regulations such as SEC 17a-4 and NASD 3010. The processing, archival and compliant long-term storage of report information such as trade confirmations, blotters and other end of day and clearing information for SEC compliance is captured within the archive. This information is used by back office personnel to reconcile front office trading activities, by compliance personnel to respond to audit requests, and by customer service personnel to respond to customer service inquiries. All of the archived data is stored and accessible via Web services for integrating data into other applications or building Web applications and re-purposing the archived data into new value added applications.

Unify Archive Platform™

Features

Storage

- Can be configured to archive all or selected mailboxes
- Can be configured to archive based on timed frequencies to specific criteria
- Captures all internal and external emails; automatically archive all email and attachments in its original format before they are delivered to a user's inbox
- Conserves storage space by using compression and removal of duplicate content
- Stores messages with different retention periods on separate physical media
- Automatically deletes expired items and provides a report of items deleted

Indexing

- Supports full-text indexing for both messages and attachments including over 400 file types plus multi-language support
- Supports groups and distribution lists
- Indexes standard message fields including From, To, Date and Subject

Search

- Restricts access according to pre-defined authorization levels
- Searches across multiple mailboxes
- Creates single or multiple sender and recipient queries
- Searches across all data in the archive in a single query
- Supports field, date range, full-text, variant spelling and stemming-based search for keyword and phrases

Retrieval

- Displays, prints or downloads search results to XML, Excel and other formats
- Highlights text in messages; identifies attachments that match the search criteria
- Displays messages and attachments in native format

Compliance

- Preserves content in non-rewritable, non-erasable format
- Automatically verifies the quality and accuracy of the archiving process
- Generates an audit log of the archiving process and user access
- Captures all internal and external communications
- Protects against unauthorized access
- Establishes user-defined organizational access hierarchy
- Establishes compliance department defined organization access tree for surveillance and review functions
- Legal Discovery process creates compliance 'packages' for review and distribution

Integration

- Integrates with enterprise mail server environments and supports High Availability and Disaster Recovery architectures
- Operates in Microsoft Windows and UNIX platforms
- Supports heterogeneous storage environments including Content Address storage systems; WORM Media (tape, CD/DVD, Optical); Hierarchical Storage Management; online, near-line, off-line
- Open integration into other systems through Web Services

Unify delivers the Unify Archive Platform™, a market leading content archiving solution for records management, compliance and eDiscovery. Its Unify Archive Platform™, a single archive platform that enables organizations to reduce storage costs, speeds the performance of email and file system backup and restores, enforces policies for compliance and corporate governance and reduces costs and time for legal discovery requests.
