

ABOUT UNIFY CORPORATION

Unify® is a global provider of application development, database and migration solutions that enable organizations to deliver modern, data-rich and cost effective applications. The company's software and services modernize and maximize the development, deployment and performance of business-critical applications and data, while providing significant and measurable return on investment for customers. Through Unify's market leading technologies, organizations deliver applications that improve efficiencies, increase competitive advantage and reduce costs.

Application Modernization Solutions

COMPOSER

COMPOSER FOR LOTUS NOTES™

Composer for Lotus Notes is a solution for cost-effective, like-for-like migration of Lotus Notes applications. Composer preserves the User Interface and Business Logic/Workflow (including LotusScript) resulting in a complete migration without business disruption. Companies use Composer to migrate their Lotus Notes applications to the .NET and SharePoint platforms.

COMPOSER SABERTOOTH™

Composer Sabertooth is a migration software and service that speeds the conversion of Team Developer or SQLWindows applications to Microsoft C# or VB.NET. Composer Sabertooth provides a complete and complementary migration solution for Team Developer customers who need a .NET based version of their application, including the ability to modify the C# code.

COMPOSER FOR ORACLE FORMS

Composer for Oracle Forms is endorsed by Oracle for converting all releases of Oracle Forms to Java/J2EE and to Oracle's Application Development Framework (ADF). It is the only product available that can extract business logic out of Oracle applications and automatically convert it to Java.

COMPOSER FOR COBOL

Composer for COBOL delivers an automated code conversion and data migration for mainframe applications and databases. Composer for COBOL is ideal for updating legacy COBOL, Ideal and Natural code to modern code and relational databases.

Rapid Application Development Solutions

UNIFY NXJ

NXJ® DEVELOPER

NXJ Developer is a powerful visual development environment for the rapid development of innovative Rich Internet Applications based on a service-oriented architecture (SOA). NXJ Developer is distinguished by its combination of intuitive visual design, flexible SOA programming, and ease of integration with both Java code and .NET business logic via Web Services.

NXJ® ENTERPRISE

NXJ Enterprise adds powerful Business Process Management and add-on Reporting capabilities to NXJ Developer for visual, fast business process-based application development.

VISION®

VISION is a cross platform (Unix/Linux/Windows) graphical object-oriented development software that provides highly scalable and feature-rich n-tier application development and deployment.

TEAM DEVELOPER®

Team Developer is a visual object-oriented rapid application development product that is proven to shorten the development cycle by providing developers the tools needed to quickly design, develop and deploy Windows or Linux solutions. Team Developer provides a complete, integrated visual development environment that includes a database explorer, integrated reporting tool, team-oriented source code management facility, and a powerful component developer facility that enables programmers to automate and customize the development environment.

ACCELL®

ACCELL is a family of 4GL-based rapid application development products for building character-based client/server applications with native optimized connectivity for Unify, Oracle, Sybase and Informix databases.

Data Management Solutions

SQLBASE®

SQLBase is a fully relational, high performance, embedded database that allows organizations to manage data closer to the customer, where capturing and organizing information is becoming increasingly critical. SQLBase provides what other database companies cannot deliver: a self-recovering, maintenance-free embedded database architecture that enables IT, ISVs and VARs to focus on their solution, rather than the underlying database technology.

SQLBASE® TREASURY

SQLBase Treasury is a fully encrypted version of SQLBase delivering protection and security of valuable data.

DATASERVER®

DataServer is a family of data management solutions. DataServer ELS is a small footprint embedded database and DataServer is an enterprise relational database management system for mission-critical, transactional applications.

Professional Services

Unify Professional Services includes migration services, technical support, consulting and education services that ensure the customers' technology investments are meeting their business objectives. Unify Professional Services help customers architect, develop, deploy, migrate and modernize applications and implement projects with less risk and reduced time to market.
