

# uCool - Unify Report Archive Solution™

## Technical Datasheet

Unify's uCOOL is the foundation for rapidly and securely sharing knowledge throughout an organization. Data from a wide range of sources may be archived quickly, securely, and reliably using uCOOL's compression and indexing technology. Information that originates from disparate systems can be retrieved using a web page, an Excel spreadsheet, or it can be converted to XML – allowing it to be recombined and repurposed to provide new insight into previously unlinked information pools.

### Unify's uCool - The Solution

For nearly 20 years, large, medium and small companies around the globe have depended on the Unify uCOOL platform to securely store, manage and distribute knowledge across their organization.

### Secure

Unify's uCOOL storage, retention, authentication and authorization conforms to the strictest regulatory requirements. Some information may be freely available, other reports or even specific pages may be highly restricted. Access may also be controlled on a group or user basis down to individual pages.

### Rapid Rollout

Implementing Unify uCOOL is fast, cost-effective, and extremely low risk. No change to your existing infrastructure is required. Data from diverse sources and platforms are ingested on the fly.

### Scalable

There really are no limits on the Unify uCOOL solution! NAS, SAN, CAS, and optical storage from a variety of vendors can be used with this solution – petabytes of data are automatically organized into accessible and useful information.

## Features

### Formatting

The original data is analyzed, and a format template is assigned. A document template is created containing information such as the date of record, filename, and file description and target folder.

### Recording

Document and format templates are used to interpret and record the information. The information is categorized for retention, compressed, and automatically indexed.

## HIGHLIGHTS

- **Archive server platforms:**  
Windows Server 2003  
Windows Server 2008  
SUN Solaris 8, 9 & 10  
IBM AIX 5.3  
RedHat Linux 4.0
- **Webserver platforms:**  
Windows Server 2003 – IIS 6  
Windows Server 2008 – IIS 7  
Solaris 8, 9 & 10 – Apache 1.3.20 & 2.0.48
- **Workstation:**  
Windows XP  
Windows 7

### Multiple Data Sources

uCOOL can archive data from most Operating Systems and applications. Format templates are supplied out of the box to handle Windows, Mainframe, UNIX, Linux, and Desktop applications, in EBCDIC, PDF, AFP, HTML, XML and other formats.

### Overlays

Form Overlays combine lines, shapes, text, and bitmaps to emulate paper documents for viewing and printing.

### Compression

The data is compressed using logical segments. On retrieval, data is retrieved selectively, without the need to decompress an entire report.

## Features

### Indexing & Searching

Index fields point to logical segments of a report, for example targeting a single line item of an invoice. Users can use indexes to locate desired information quickly and efficiently across multiple reports.

### Viewer

Browser based viewer access makes Information available Enterprise wide.

### XML Factory

Historic data from legacy and operational systems can be retrieved in XML format. When integrated with web services, information from different source applications can be joined to provide new business knowledge.

### API's

A rich API set allows end users and partners to create customized solutions for their particular needs.

### Distributed Administration

Administration can be distributed to remote offices for local user management.

### Security

Integrate with existing or utilize uCOOL's built in security model. Manage data access for users and groups with report and page level security settings.

**Unify delivers industrial-strength Archiving solutions purpose-built to help organizations archive, discover and preserve information stored in transactional systems, email, databases and social media systems scattered across the enterprise. With Unify, companies for the first time have complete protection and coverage of all data sources in a single, unified global repository. The Archive tracks all events with 100% accuracy and helps enforce policies for compliance, corporate governance, and reduces time and costs for legal discovery requests.**
